PROFESSIONAL SUMMARY

Software Engineer with **3+ years** of experience designing distributed systems, cloud integrations, and AI-powered applications. Built SAP ERP pipelines processing **10K+ daily transactions**, reduced system latency by **35%**, and maintained **95%** service reliability at scale. Currently deepening expertise in applied AI and ML systems, with hands-on projects in RAG, forecasting, and generative AI.

EXPERIENCE

Software Engineer Apr 2025 – Present
Innovapptive

- Designed distributed SAP ERP integrations processing **10K+ daily transactions** across inbound, outbound and delta-sync workflows.
- Reduced document-processing latency by **35%** by architecting scalable cloud ingestion pipelines across AWS S3 and Azure Blob.
- Improved system reliability to **95%** through retry orchestration, validation pipelines and automated recovery safeguards.
- Cut debugging time by **40%** by building structured observability and logging across microservices.
- Designed RabbitMQ-based async workflows handling **4K messages/day**, reducing inter-service coupling.
- Reduced production environment refresh failures in SAP integration services by introducing structured migration scripts and refresh runbooks, cutting post-refresh breakages and accelerating recovery time.

Software Engineer Jul 2023 – Apr 2025
Brane Enterprises

- Owned design and development of a Jira-style workflow platform supporting automation, collaboration and operational visibility.
- Built personalisation engine increasing user engagement by **20%**.
- Implemented WebSocket collaboration layer enabling real-time multi-user synchronisation.
- Reduced API latency by **20%** through MongoDB query tuning and schema optimisation.
- Maintained **90%+** automated test coverage, improving release stability and deployment confidence.

AI Research Intern Jan 2023 – May 2023
DRDO

- Improved deep learning models (ResNet, VGG) for defense-grade image classification and object detection tasks.
- Reduced model training runtime by **25%** through optimisation of experimentation pipelines.

PROJECTS

Medical RAG Assistant — TypeScript LangChain ChromaDB Ollama

- Built a RAG application answering questions over clinical-guideline PDFs with cited sources and confidence scores.
- Chunked documents with LangChain, embedded them locally into ChromaDB, and generated answers with a local Ollama LLM.

RiskLens — Next.js PostgreSQL Drizzle Docker

- Built a financial risk platform that ingests transactions, evaluates configured risk rules, and generates alerts.
- Presented alerts to authenticated investigators, with the PostgreSQL schema managed through Drizzle migrations.

Stock Price Predictor — Python Django TensorFlow React

- Forecast stock prices with an LSTM model on yfinance data, served via a Django REST API to a React chart dashboard.

TECHNICAL SKILLS

Languages	JavaScript / TypeScript, Python, Java
Frameworks	Node.js, Express, Django, Angular, React
Distributed Systems	System Design, Microservices, RabbitMQ, Event-Driven Systems, Caching, Fault Tolerance
Cloud / Data	AWS S3, Azure Blob, MongoDB, MySQL, Redis, Docker
AI / ML	OpenAI APIs, HuggingFace, TensorFlow, PyTorch, Scikit-learn

EDUCATION

CVR College of Engineering
B.Tech in Computer Science *2019 – 2023*

IIT Kanpur
Certification – Generative AI & Machine Learning *2024 – 2025*
